Title Healthy and moderate to severe diarrhea 16S expression data

Description Gut 16S sequencing expression data from 992 healthy and
moderate-to-severe diarrhetic samples used in 'Diarrhea in
young children from low-income countries leads to large-scale
alterations in intestinal microbiota composition'.

LazyData yes

R topics documented:

---

msd16s-package	*Curated dataset of many healthy and moderate-to-severe diarretic gut 16s samples on the 454 FLEX platform.*

Description

Data used in 'Diarrhea in young children from low-income countries leads to large-scale alterations in intestinal microbiota composition'. Measurements are number of reads clustered into OTUs (operatonal taxanomic units) by DNAClust.

msd16s	*Curated dataset of many healthy and moderate-to-severe diarretic gut 16s samples on the 454 FLEX platform.*

Description

Data used in 'Diarrhea in young children from low-income countries leads to large-scale alterations in intestinal microbiota composition'. Measurements are number of reads annotated for a particular cluster within a given sample followed by filtering. Sequencing was performed on the 454 Flex platform.

format

Data is stored as an MRexperiment-class object. Using MRcounts one can obtain the 16S count matrix produced using using DNAclust (http://dnaclust.sourceforge.net/). The pData function accesses a data frame with the following columns:

Type: Status of samples: Case, Control

Country: Country of origin

Age: Month

AgeFactor: Month group

Dysentery: Dysentteric (1) non-dysenterric (0) indicator

The fData function accesses a data frame with the following columns:

OTU: OTU cluster id

Taxonomy: Full taxonomic profile

superkingdom: superkingdom

phylum: phylum

class: class

order: order

family: family

genus: genus

species: species

clusterCenter: The OTU cluster's representative sequence
